

Personal radiation protection products for healthcare professionals

AttenuTech® supplies important products and devices that protect medical personnel and patients during medical imaging procedures where dangerous and harmful radiation is emitted, such as CT Scans, Fluoroscopy and NucMed Studies. As the U.S. FDA and the federal government have recently reported, even when done properly, medical imaging can damage DNA and increase a person's lifetime risk of cancer. Consequently, every dose from every medical imaging procedure is significant. Through superior strategic relationships AttenuTech® is positioned to provide essential protective radiation modalities for patients and staff, per current federal agency mandates.

Genuine MicroLite® Radiation Protective Eyewear: The #1 choice worldwide. Dozens of frame, color and Rx combinations with industry leading features for safety and comfort.

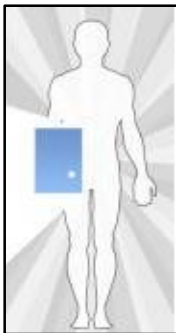

Laser eyewear for all laser filters available in FitOver and our very popular MicroLite8 frames.

AttenuTech® Radiation Reducing Gloves: Latex free, powder free, disposable.

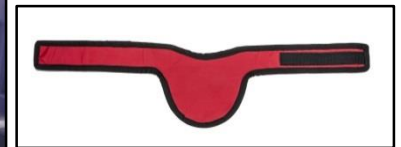

Choose your radiation apron from many styles, such as frontal aprons, vest/skirt or jacket style aprons and personalize it from dozens of fabric patterns and embroidery choices. AttenuTech® mobile barriers and shields help protect physicians, staff and patients from radiation scatter.

(L) SorbX™ radiation absorbing pads, shields and drapes. Absorbent and non-absorbent.

Laser-X® Radiation and Laser Protection

Thyroid collars: comfortable, adjustable, several style choices.
